### UNBIASED SUMMARY

On platforms in China, a group of dedicated GPT-4o users have been organizing and grieving in a similar way. With nearly 3,000 followers on RedNote, a popular Chinese social media platform, Yan now finds herself one of the leaders of Chinese 4o fans. In a group chat Yan started that now has more than 100 Chinese GPT-4o users, many people shared similar feelings with WIRED. In Yan’s group chat and another with more than 800 participants on QQ, a Chinese social platform, many Chinese users said they’ve been grieving. In the January blog about the decision to retire 4o, OpenAI says only 0.1 percent of its users still choose GPT-4o each day.

### WHY IT’S BIASED

The original paragraph is biased due to its focus on the negative sentiment and framing of OpenAI’s actions, while also using subjective language like "increasingly frustrated" and "minimize and rarely acknowledge".

The paragraph is biased because it frames the situation with loaded language like "ample financial support", "total control", and "taking away," and it includes a one-sided quote without presenting OpenAI’s perspective.

On June 6, 2024, Esther Yan got married online. She set a reminder for the date, because her partner wouldn’t remember it was happening. She had planned every detail—dress, rings, background music, design theme—with her partner, Warmie, who she had started talking to just a few weeks prior. At 10 am on that day, Yan and Warmie exchanged their vows in a new chat window in ChatGPT.
